

Hello recruiters,

Here is a bit about myself, I am currently a fourth-year undergraduate student at UCSD and will be graduating in Dec 2019. My favorite thing to do in the SWE field is to build beautiful and intuitive applications that people can directly use and enjoy. I also enjoy working on different projects/ technologies which I can break down into different small steps and implement the solution incrementally, and it brings me a lot of satisfaction as I reach different milestones and receive feedbacks from teammates and users.

My experience consists of my current internship at ARM-- where I work on many different technologies such as DevOps/CI/IoT/testing. This is a very cool and unique experience, as I get to work on different things surrounding software development. Although it does not sound like I've gained a lot of development during this internship, I do make it up with many side projects that I have done outside of coursework. You can check them out from my Github: [www.github.com/kelvinluime](http://www.github.com/kelvinluime) or my personal website also has brief summaries for a few of them: [kelvinlui.me](http://kelvinlui.me) The most recent project that I'm very proud of is a member portal I made for my student organization: <https://hkn.ucsd.edu/member-portal/> for members to submit their resume and showcase to employers. Although it's a simple React web application that I made over the winter break, this is my first ever app that there are actual users, and I am responsible for the things to run smoothly (security, data usage, etc), documentation for next person who will work on it, etc. Seeing its launch was one of the most satisfying things I've had after working on many software projects. Besides that, I have also attended an iOS boot camp last year and learn a few tricks in iOS development, I've gotten very interested in iOS development because of its intuitive iOS UI framework for developers and users.

I am looking forward to talk with you if you are interested in learning about me. I believe I would be a great fit for this position with my passions in front-end development and data science!

Best regards,

Kelvin Lui
